A publication of the Mediterranean Consortium for the 32nd International Geological Congress The Wadden Sea area of the North Sea is one which undergoes rapid morphological changes. Under natural conditions, the barrier islands would adjust themselves to a rising sea level. However, because the islands are densely populated and have an important role as holiday resorts, morphological changes are undesirable. Coastal engineering counter-measures have been undertaken to prevent beach erosion, shifting of tidal inlets, breaching of dune ridges and landward-directed washover. The natural processes and the results of human interference including the negative consequences of many of the measures are discussed in detail. The author presents the current state of research, together with the results of his own investigations. In addition, a comprehensive description of the geomorphological development and recent problems of the barrier islands from Texel to Fanø is given for the first time. The book includes 40 colour photographs and 393 figures, almost all previously unpublished. Satellite and radar imagery as well as many aerial photographs are also included. The book is intended for geomorphologists, sedimentologists, environmentalists and all those with a scientific interest in tidal flats and barrier islands. The NAG-TEC project was a collaborative effort by the British Geological Survey, the Geological Survey of Denmark and Greenland, the Geological Survey of Ireland, the Geological Survey of the Netherlands, the Geological Survey of Northern Ireland, the Geological Survey of Norway, Iceland GeoSurvey and the Faroese Geological Survey (Jarðfeingi), along with a number of academic partners and significant support from industry. The main focus was to investigate the tectonic evolution of the region with a particular emphasis on basin evolution along conjugate margins. A key outcome was the development of a new tectonostratigraphic atlas and database that includes comprehensive geological and geophysical information relevant for understanding the Devonian to present evolution of the NE Atlantic margins. These provide the foundation upon which ongoing research and exploration of the area can build. This Special Publication provides some of the first scientific results and analysis based on the project, including regional stratigraphic analysis and correlations, crustal structure and interpretation of geophysical data sets, plate kinematics and the evolution of igneous provinces. "We are all becoming increasingly vulnerable to natural disasters. Disaster management is therefore an important topic for all - from high school students to researchers. The disastrous consequences of these 'natural' events are largely due to unsustainable practices and activities. Disaster data in recent years show increasing trends in physical, social and economic impacts. While the mega disasters capture media attention, there are many small disasters which go unnoticed, but affect lives and livelihoods on a daily basis. While a global perspective of disaster management is necessary, it is important to emphasize local solutions." "This book targets some of the key issues in disaster management, focusing on innovative research and application in this broad arena. The chapters are organized under 5 interrelated themes: Hazards and disasters; Risk and vulnerability; Technology; Education and community; [and] Crosscutting issues." "It will serve as an up-to-date reference book for researchers and practitioners in the field of disaster management throughout the world."--Back cover. Five great poets of the Tang dynasty (eighth and ninth centuries A.D.) are represented in this collection: Wang Wei, Li Po, Tu Fu, Li Ho, and Li Shang-Yin. Each poet is introduced by the translator and represented by a selection that spans the poet's development and career. These constitute some of the greatest lyric poems ever written. They may ride off into the sunset, but cowboys never go out of style. These manly men embody the fiercely independent, earthy alpha male and hero who isn't afraid to show the gentle, nurturing side of his complex nature when faced with a woman in need. Even when he's coated with dust from riding behind a herd of cattle or up to his knees in mud freeing a calf from a wallow, this stud still generates a lot of Cowboy Heat. Delilah Devlin's Cowboy Lust was a sensation, hitting the top ten of romance books and generating a river of praise. Award-winning Devlin is back on the ranch with stories of rugged romantics, rough riders, and rope wranglers sure to satisfy any reader who craves the idea of that gruff, romantic hero, a man of few words but many moves. Cowboy Heat sits tall in the saddle, winning hearts and spurring readers to new heights of happiness. The only way two people can keep a secret is if one of them dies. "Fast action from dramatic start to thrilling climax. Sailors and medics will delight in the accuracy of technical detail. Patterson delivers thrilling suspense fiction." Donn Taylor, author of Lightning on a Quiet Night, Rhapsody in Red, and The Lazarus File. An early morning wreck. A grisly, fiery mess. Paramedic Jim Stockbridge does his best to save the family but the flames drive him back. Now, with a masked killer out for revenge and two beautiful women on his mind, Jim is about to learn that failure is not an option - especially when lives are on the line. together with contributions by invited geoscientists The Central Andes, whose orogenic activity is so impressively documented by recent volcanism and counterparts from other countries, during a workshop held in Berlin, 23-25 May 1990. The largest of the islands that make up the greater Hong Kong area, Lantau remains decidedly separate from the urban sprawl of Hong Kong island and the Kowloon peninsula, boasting a wide array of native animals and plants as well as numerous longterm "visitors," such as a monk born in Fujian in 1897, an artisan guitar maker, traditional Chinese medical practitioners, and English botanists and graphic designers. Driving Lantau documents these lives and reconstructs various perspectives of the island over the past half century, from the effect of wars and waves of immigrants to marauding pirates and the introduction of Disneyland. This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America. Based on a university course, this book provides an exposition of a large spectrum of geological, geochemical and geophysical problems that are amenable to thermodynamic analysis. It also includes selected problems in planetary sciences, relationships between thermodynamics and microscopic properties, particle size effects, methods of approximation of thermodynamic properties of minerals, and some kinetic ramifications of entropy production. The textbook will enable graduate students and researchers alike to develop an appreciation of the fundamental principles of thermodynamics, and their wide ranging applications to natural processes and systems. Text Mining and Visualization: Case Studies Using Open-Source Tools provides an introduction to text mining using some of the most popular and powerful open-source tools: KNIME, RapidMiner, Weka, R, and Python. The contributors-all highly experienced with text mining and open-source software-explain how text data are gathered and processed from a w Are you wrestling with any of these problems? You re struggling along from paycheck to paycheck You re earning too little to ever afford your dreams You ve got too little stored away to live comfortably in retirementThen this book is for you!If you re like most of us, your years in school did little to prepare you for the challenges of the real world. They are more likely to have planted seeds of financial and emotional failure in your life. These seeds sprout later, sabotaging our most sincere attempts to get ahead and create happy, prosperous lives for ourselves and our families.This book reverses the damage. It shows you how to identify and reverse the harmful programming you unconsciously received in the classroom, and learn new habits that will set you up for financial and emotional success right now. With the blueprint in this book, you will learn attitudes and abilities that will help you not merely to survive, but to prosper, regardless of whether the economy goes up or goes down. If you want to be rich and happy, read this book! This book provides a complete Phanerozoic story of palaeogeography, using new and detailed full-colour maps, to link surface and deep-Earth processes. Volcanoes are intimately tied to the history of humanity, they help forge the Earths crust and atmosphere, and they are very much an active feature of today. The archaeology of most ancient civilizations of Europe preserves the imprint of spectacular and volcanic phenomena while, in modern times life is still affected by large eruptions from Europes active volcanic systems. The eruption of Santorini, some 3600 years ago in the Aegean, probably inspired the Greek fables of Atlantis; the eruptions of Etna on Sicily are the origin of the forges of Cyclops and other myths; and the regular eruptions from Stromboli earned its Roman name, the Lighthouse of the Mediterranean. Eruptions in Iceland over the past few centuries have shaped more recent European history and highlight the dramatic effects that distant large eruptions can have on our modern way of living. This thoroughly revised and updated edition reflects modern research and is now illustrated in colour throughout. It presents the volcanoes of Europe, as they are today and tells how they have shaped our past. The volcanic systems of the Mediterranean basin, the Atlantic, and of mainland Europe are introduced and described in clear prose with a minimum of technical jargon. Some of Europes ancient volcanic systems is also described as these have been fundamental in shaping the science of volcanology. The origins, history and development of Europes volcanoes is presented against a background of their environmental aspects and contemporary activity. Special attention is given to the impact of volcanoes on the people who live on or around them. The book is written for student, amateur and professional earth scientists alike. To help guide the reader, a glossary of volcanic terms is included together with a vocabulary of volcanic terms used in European languages. "Twenty seven articles and eight special maps provide the framework study of this important East European basin. This study was jointly published in 1988 by the AAPG and the Hungarian Geological Society, and includes analysis of the tectonics, sedimentation history, biostratigraphy and correlation, and all aspects of basin development. Reflection seismic studies show the structure of the basin and basement beneath. Also featured are papers about heat flow, basin structures, regional perspective, regional volcanism, organic maturation, and petroleum source, maturation, and migration."--Container. Liberalism was not only the first modern ideology, it was also the first secular movement to have an international presence. The scholarly articles in this collection, skillfully edited by Ivan Z. Denes, examine liberal ideas and movements from Scotland to the Ottoman Empire. The volume seeks to uncover and analyze various relationships between liberalisms and nationalisms, national identities and modernity concepts, nations and empires, nation-states and nationalities, traditions and modernities, images of the self and the others, modernization strategies and identity creations. This volume provides an important historical analysis that is essential toward understanding the questions and motivations of liberalism in the European Union today. This is, therefore, a timely contribution to both historiography and contemporary politics. From these studies we gain a number of important insights not only into the variety of liberal nationalisms, but also into the unity and diversity of European history. Although there are a number of books in this field, most of them lack an introduction of comprehensive analysis of MS and IR spectra, and others do not provide up-to-date information like tandem MS. This book fills the gap. The merit of this book is that the author will not only introduce knowledge for analyzing nuclear magnetic resonance spectra including 1H spectra (Chapter 1), 13C spectra (Chapter 2) and 2D NMR spectra (Chapter 3), he also arms readers systemically with knowledge of Mass spectra (including EI MS spectra and MS spectra by using soft ionizations) (Chapter 4) and IR spectra (Chapter 5). In each chapter the author presents very practical application skills by providing various challenging examples. The last chapter (Chapter 6) provides the strategy, skills and methods on how to identify an unknown compound through a combination of spectra. Based on nearly 40 years researching and teaching experience, the author also proposes some original and creative ideas, which are very practical for spectral interpretation. Historical stone arch bridges are still a major part of the infrastructure in many countries. Although this type of bridge has proven to be an efficient construction type, it often poses the problem of insufficient numerical models of the load bearing behavior. Therefore the book introduces methods to adapt life loads and introduces different types of numerical models of the load resistance respectively. The book continues with the introduction of specific damages and strengthening techniques. The book particularly focuses on the probabilistic safety assessment of historical arch bridges, for which often only limited material and structural data is available. This book is written by a leading authority on the subject of magmatic sulfide deposits. An overview of deposit types, accompanied by a summary of the resources of nickel, copper and platinum-group elements in the world's principal known deposits, is followed by a summary of the relevant physical chemistry. The core of the book comprises a discussion about the geology and geochemistry of each of the deposit types in turn, accompanied by the implications of this data to the origin of the deposits in the

light of our understanding of the chemical processes involved. A final chapter focuses on the use of the genetic concepts in exploration. This book offers a systematic, empirical examination of the concepts of disasters and sustainable economic development applied to many cases around the world. It presents comprehensive coverage of the complex and dynamic relationship between disaster and development, making a vital contribution to the literature on disaster management, disaster resilience and sustainable development. The book collects twenty-three chapters, examining theoretical issues and investigating practical cases on policy, governance, and lessons learned in dealing with different types of disasters (e.g., earthquakes, floods and hurricanes) in twenty countries and communities around the world. The Capitol Hill aide who scandalized Washington, D.C., with her blog has now written a sharp, steamy, utterly unrepentant novel set against the backdrop of the nation's capitol. When Jacqueline Turner's fiancé gives her two days to move out of his apartment, she has no choice but to leave New York City and crash with her best friend in Washington, D.C. She needs an exciting new life--not to mention real employment. Where better to get a fresh start than the nation's capitol? Alas, D.C. turns out to be a lot more buttoned-up and toned down than she'd hoped. It's a town where a girl has to make her own excitement--and Jacqueline Turner is just the woman for the job. From the married presidential appointee who gives her cash after each tryst to the lascivious Georgetown lawyer who parades her around like something out of *Pretty Woman*, Jackie's roster of paramours grows so complicated that her friends ask her to start a blog so they can keep up. But in a small town like Washington, the line between private and public blurs very easily, and Jackie quickly realizes this blog idea may be more than she bargained for. Deliciously gossipy and impossible to put down, *The Washingtonienne* is every bit as steamy and outrageous as the real-life exploits that inspired it. In 1988 Tehran, teenaged girls Farrin and Sadira are sentenced to death for homosexuality. Farrin prays that her wealthy family will be able to save them before it is too late.
